HVAC Refrigerant Analysis

To protect cooling and refrigerant systems from contamination and failure, fluid properties within compressors need to be maintained within extremely close tolerances.

The presence of a few parts per million (ppm) of a contaminant or the application of the wrong refrigerant could spell the difference between safe, reliable operation and catastrophic failure.

Bureau Veritas' HVAC refrigerant analysis program can give you the security of knowing that the condition of your equipment is within safe operating ranges and verifies that lubrication is taking place as specified, allowing effective maintenance scheduling.

Bureau Veritas laboratories house the latest automated and multi-position analytical equipment. Our methods of analysis are in accordance with the Air Conditioning & Refrigeration Institute (ARI) Standard 70095 and UL 1995 /CSA C22.2 No. 236. A full range of laboratory analyses are available for a fraction of the costs of replacement, major repair, or downtime.

Key Features

150 years of technical excellence in the Oil & Petrochemicals market

Global Lube Oil Analysis Management System (LOAMSSM) OCM Platform

Extensive global network of offices and laboratories

Precise, dependable and prompt reporting

Independent and impartial testing results

Customer Benefits

Your product expert for lubricants and coolants

Exclusive software that brings clarity and meaning to complex laboratory results and maintenance recommendations that improve production and save money

Ability to test your samples anywhere, any time

Accurate results, the first time, every time

Quality assurance executed to the highest standards, trusted by all parties

Testing & Analysis

Determining the purity of recovered, recycled and reclaimed refrigerants is vital. We can help identify contaminant and wear before they lead to a host of problems including high head pressures, acid formation, capillary restrictions, and oil migration and bearing failure.

Alternative refrigerants can be incompatible with old system components and used refrigerants are more likely to be contaminated. These contaminants can be incompatible with compressor metals, gaskets, seals or other system components, thus reducing the overall energy efficiency of the unit, and increasing the risk of system damage.

We offer 24/7 turnaround service on refrigerant analysis, helping you to lower your maintenance costs and increase the lifetime of your systems.

Key Capabilities

Coolants

Refrigerant CFC's:
R11, R12, R113, R114, R115

Lithium Bromides

Refrigerant HCFC's: R22, R123

Lubricating Oil

Refrigerant HFC's:
R134a, R404a, R407C, R410a

Other Gases

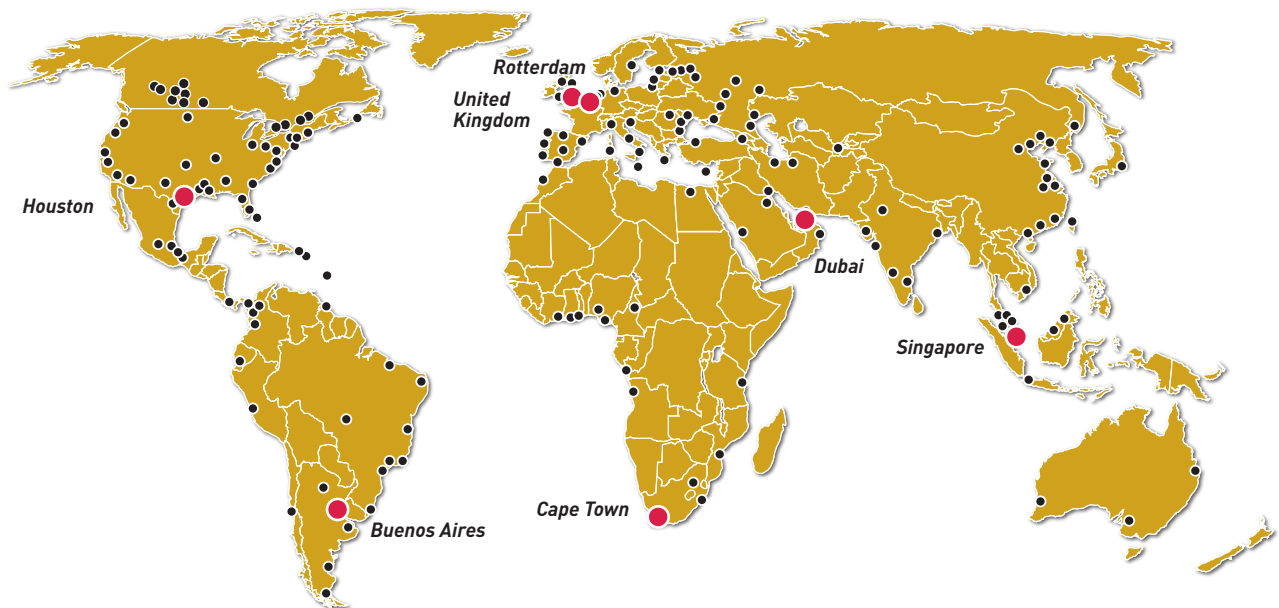

Refrigeration Oils

Bureau Veritas also help clients define their strategies, manage risk, monitor quality, improve performance and enhance their return on investment throughout the critical design, construction and transaction phases. Services include:

- Design review
- Environmental assessments
- In-service inspection and verification
- Property condition assessment and monitoring
- Supervision during construction and commissioning
